ABOUT ME

B.Tech Computer Science student specializing in Cyber Security & Digital Forensics at VIT Bhopal with a CGPA of 8.89. Built real-world security tools including an AI-powered honeypot system and a network penetration testing platform. Experienced in Python, full-stack development, and applied cybersecurity. Seeking opportunities in security engineering and digital forensics.

PROJECTS

ILLUSEC — AI-Powered Honeypot & Threat Detection System

- Designed and deployed an intelligent honeypot system using ML-based anomaly detection (Isolation Forest) to monitor and respond to real-time network intrusions
- Built a live WebSocket dashboard for real-time attack visualization; Dockerized and deployed the full application

Technologies: Python, FastAPI, React, WebSocket, Docker, Scikit-learn

ARGUS — AI Network Penetration Testing Platform

- Built an AI-assisted penetration testing tool integrating Nmap for automated network scanning to identify open ports, services, and OS vulnerabilities
- Developed dual-layer threat analysis (ML model + vulnerability database) with a Flask dashboard and automated PDF security reports

Technologies: Python, Flask, Nmap, Scikit-learn, Bootstrap, WeasyPrint

KISAN-AGI — AI Agricultural Assistant

- Built the complete frontend and MongoDB database architecture for an AI-powered crop disease diagnosis platform serving rural farmers
- Developed geospatial queries and Google Maps integration to locate nearest government-supported agri-shops, with multilingual support

Technologies: React, MongoDB, Gemini 1.5 Pro, Google Maps API

MERN Authentication System

- Built a full-stack authentication system with JWT, bcrypt password hashing, and HTTP-only cookies following security best practices

Technologies: MongoDB, Express.js, React, Node.js

EXPERIENCE

Software Development Engineer Intern — Bluestock Fintech, Pune

- Executed ML-based financial models using Python scripts to analyze Excel datasets and predict stock and equity share valuations, contributing to fintech data analysis workflows
- Assisted in developing and testing fintech application features using React, Python, and REST APIs to improve application functionality
- Collaborated with the engineering team to debug production issues and improve application reliability

Cyber Security Intern — Teachnook, Remote

- Completed hands-on training in cybersecurity fundamentals and ethical hacking practices
- Built a Python-based web crawler to scan websites, extract accessible links, and generate structured PDF reports
- Gained practical exposure to network security concepts and vulnerability assessment techniques

EDUCATION

Vellore Institute of Technology — B.Tech Computer Science (Cyber Security & Digital Forensics) 2024 – 2028

Sehore, Bhopal | CGPA: 8.89

Narayana Junior College

2022 – 2024

Kalyan, Mumbai

SKILLS

- Languages & Web: Python, JavaScript, C++, Java, HTML, CSS, React.js, Bootstrap
- Backend & Databases: Node.js, Express.js, Flask, FastAPI, MongoDB
- Security Tools: Nmap, Wireshark, Kali Linux | AI/ML: Scikit-learn, Gemini API
- Tools & Platforms: Git, GitHub, Docker, Linux, VS Code
- Concepts: Network Security, Penetration Testing, Digital Forensics, Computer Networks, OWASP Top 10, DSA, OOP

ACHIEVEMENTS & CERTIFICATIONS

- Solved 78+ DSA problems on LeetCode | Gen AI Hackathon Participant — AI Mumbai (Dec 2025) | Microsoft Learn Student Ambassador — Microsoft Imagine Cup (Oct 2024)
- Cyber Security Job Simulation — Deloitte | Ethical Hacking — Cisco | Introduction to Cyber Security — Cisco
- Microsoft Certified: SC-900 (Security, Compliance, and Identity Fundamentals) | Microsoft Full-Stack Web Development
- Blockchain and Its Applications & Cyber Security Framework — NPTEL | Python Essentials & Fundamentals of AI/ML — Vityarthi
